

2007 Global Green House Gas Inventory

LEVI STRAUSS & CO.

Global Metric Tonnes of CO₂-equivalent by Scope - 2007

In 2007 Levi Strauss & Co. expanded its 2006 green house gas (GHG) inventory to include all owned and operated facilities worldwide. In doing so, the number of facilities in our inventory increased from seventy six in 2006 to three hundred eight in 2007.

America's Region: The majority of our GHG emissions are from our America's region where we have the largest facilities by square foot and the most sales. Our distribution centers represent the biggest share of the regions GHG's.

Europe, Middle East, North Africa: This region is responsible for the second largest portion of LS&CO.'s emissions. In 2007 the Europe, Middle East, North Africa region is where three of our four major manufacturing plants were located. These facilities represent the majority of the regions emissions.

Asia Pacific: Having the lowest number of total facilities and facilities of the smallest size, this region is responsible for the smallest portion of Levi Strauss & Co.'s global emissions.
